

How do you get the most out of your LDAR data management system?

Take it with you!

Now there's a comprehensive software tool for LDAR data collection. More than ever before, it will allow technicians and auditors in the field to perform the very same functions that previously had to be done back in the office on a keyboard. Because this software is truly an un-tethered extension of the LeakDAS® data management application, we call it **LeakDAS® Mobile Edition**.

- ✓ Runs on off-the-shelf Windows Mobile PDA-style data loggers, including intrinsically safe models
- ✓ Fully integrated with your LeakDAS® database
- ✓ Upload/Download problems solved by Synchronization
- ✓ Wireless Sync with your database anytime with Wi-Fi enabled Windows Mobile devices
- ✓ No lost data with the help of real-time backup capabilities
- ✓ Compliance driven functionality previously unavailable in the field

For Fugitive Emissions LDAR program operations and management, **LeakDAS® Mobile Edition** is a productivity and compliance assurance tool like no other. It puts the power of LeakDAS® LDAR data management into the palm of your hand.

- ✓ Designed for monitoring, tagging and tag maintenance
- ✓ Designed for flexible work flow
- ✓ Direct-read from TVA analyzers using 3rd party wireless devices
- ✓ Simplified pricing and hassle-free licensing for however many data loggers you need to do your job

Tagging, Tag Maintenance, Auditing

- When designing *LeakDAS® Mobile Edition*, InspectionLogic kept its familiar tagging functionality for hand-held devices, and then added features that make LDAR data collection faster and more accurate than it has ever been.
- All component data fields and pick lists in your LeakDAS® database are available to you in your data logger. Adding new components is easy, fast and accurate.
- ***LeakDAS® Mobile Edition* introduces a capability that did not previously exist while working in the field.** Now you can add or change regulations that are assigned to components.
 - Being able to add or edit regulation assignments while physically at the component in the field offers the opportunity to validate that the correct regulatory requirements are being met.
 - Giving authorized users the ability to assign or change certain fields allows software logic in LeakDAS® to process data in accordance with LDAR compliance requirements, permit requirements, Consent Decrees, or company policies.

Designed for Monitoring

- Pressing one button automatically does all of this:
 - calculates the net reading by subtracting the background,
 - logs your maximum net reading,
 - determines if the component passed or failed based on the most stringent leak definition of all the regulations applicable to this component,
 - assigns a date/time stamp,
 - saves the passing reading,
 - moves you to the next component in the LeakDAS® Route Sequence.
- If the component failed, *LeakDAS® Mobile Edition* will automatically display “Leaking” and prompt the user to enter compliance information pertaining to repairs and retests.

“Upload/Download” Simplified

- With *LeakDAS® Mobile Edition*, you can forget about the time consuming and frustrating process of moving files between the PC and the data logger.
 - By pressing the Start button, *LeakDAS® Mobile Edition* will establish a connection directly to your database, and then automatically synchronize with it. With WiFi and network access, this can be done WIRELESSLY!
- *LeakDAS® Mobile Edition*'s Sync process will simultaneously perform these actions:
 - Transfer all inspection results, tag edits and new tag information contained in *Mobile Edition*'s Quarantine (LastIns) table to the LeakDAS® Quarantine (LastIns) table;
 - Transfer from the database all new Routes assigned to the user of that particular LeakDAS® Mobile device;
 - Transfer to the LeakDAS® Mobile device any changes made to picklists in the LeakDAS® database;
 - Log a record of each successful Sync between the LeakDAS® Mobile device and the database.
